

RDM EC6000i

Electronic Check Reader & Imager

Convert Paper Checks Into
Savings and Convenience

Benefits at a Glance

- 99.9% MICR read rate, best in the industry
- Works with virtually all point-of-sale terminals
- Automatic check franking ability maximizes point-of-sale efficiency

The EC6000i is a cost-effective, feature rich, imaging solution. It is the most widely supported small document imager used for check conversion and walk-in bill payment processing in the U.S. payments industry. The EC6000i provides connectivity to the most popular POS terminals and has a footprint designed to maximize counter space. The EC6000i delivers the industry's highest MICR read accuracy which results in lower administrative returns due to MICR misreads and rejects. It also captures crisp clear binary images exceeding the industry's demands for legible images. In addition, a bi-directional document drive and features such as franking make the EC6000i one of the most versatile and reliable imaging products on the market.

RDM EC6000i

Features

- Industry-leading MICR read rate that exceeds 99.9%
- High-quality images that provides a clear, full check viewing
- Images compress into a small file size for faster uploading
- Franking ability: automatically prints "ELECTRONICALLY PRESENTED" on the check – increasing efficiency at the point of sale
- Superior paper handling that reduces paper jams and imaging errors
- Connectivity to most popular POS terminals ensures maximum versatility and ease of integration
