Fusebox
Payment Gateway

Fusebox Hosted Payment Gateway

The Force of Fusion

No matter what business you're in – hospitality, restaurant or specialty retail – Fusebox can help you better manage your payment processing, stay compliant and remain competitive.

FUSEBOX DELIVERS PAYMENTS Fusebox is a highly secure, reliable and flexible payment gateway that makes it easy for your customers to handle a growing volume of payment and other transactions. Elavon's solution provides a single interface for delivering payments and other transactions securely from any business location to your choice of banks, processors and acquirers in a secure, compliant environment. Batch management and reporting are accessed through an online portal, providing a real-time view into the entire transaction lifecycle.

SECURITY & STABILITY DELIVER PEACE OF MIND
Since Fusebox is a hosted solution, critical cardholder data is moved from the business's location to a centrally managed host within a secure data center at Elavon – mitigating risk and reducing the associated PCI liability.

- Fusebox incorporates the latest data security protections and exceeds the most stringent PCI and PA-DSS requirements and industry compliance standards.

- A comprehensive and flexible Data Protection Module features advanced security, including encryption and tokenization. A Secure Device Module supports the removal of all cardholder information from the POS/PMS and replaces it with a Unique ID ("token") and truncated card number.

- Fusebox is built on a proven and reliable Stratus System platform for fault tolerant computing that delivers maximum uptime.

Experience peace of mind and ultimate freedom with our robust and secure next-generation payment solution.

Elavon

Extensive Connectivity Options Provide Freedom of Choice

Elavon understands the way you accept payments varies greatly depending on your business.

Fusebox reduces the complexities by providing one-to-many connectivity, consolidating payments from various systems and securely delivering them to your choice of certified banks/processors. Standardized APIs ensure seamless integration with hundreds of value-added resellers and software providers supporting multiple POS/PMS platforms. Fusebox streamlines processor certifications so you typically only need one certification to Elavon's hosted gateway – not to each processor – minimizing the time and expense associated with adding new POS systems or end points. You can choose from a variety of gateway network connectivity options, including SSL, MPLS, VPN and dial.

Fusebox is Built on a Foundation of Six Key Elements

SECURITY. The hosted environment ensures that cardholder data is stored behind our firewall, protecting you and your customers.

STABILITY. The core platform is built on proven, dependable and redundant switch technology that delivers maximum uptime.

CONNECTIVITY. Interfaces to a vast array of POS/PMS providers and certified transaction processors provide the freedom of choice.

FLEXIBILITY. Payment types, communication methods, processing rules and user rights are mapped to the unique needs of your business.

VISIBILITY. Batch management and reporting are accessed through an online portal, providing a real-time view into the transaction lifecycle.

SIMPLICITY. It's easy to add new locations, implement system upgrades and maintain version control across your enterprise.
